Description

Summary: Assets invested by remaining loan duration have loan duration time frames presented with 0 EUR values, with can confuse client on chart representation as the rest of the charts present only information that is found in actual actively managed investments and would present an illusion for the customer that investments made - cover all duration periods.

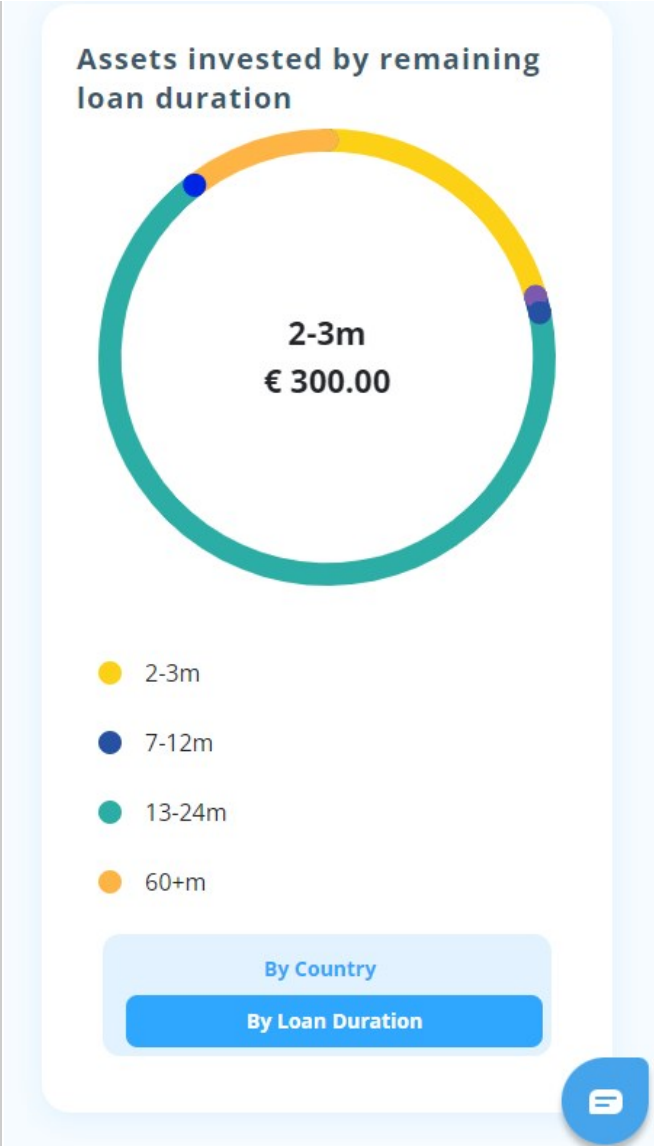

This reduces cohesiveness over the range of charts presented.

Steps to reproduce:

1. Go to <https://income-frontend.code-lab.it/invest>
2. Log in
3. Navigate to the Account page
4. Scroll down to the Assets invested donut chart
5. <By Loan Duration>

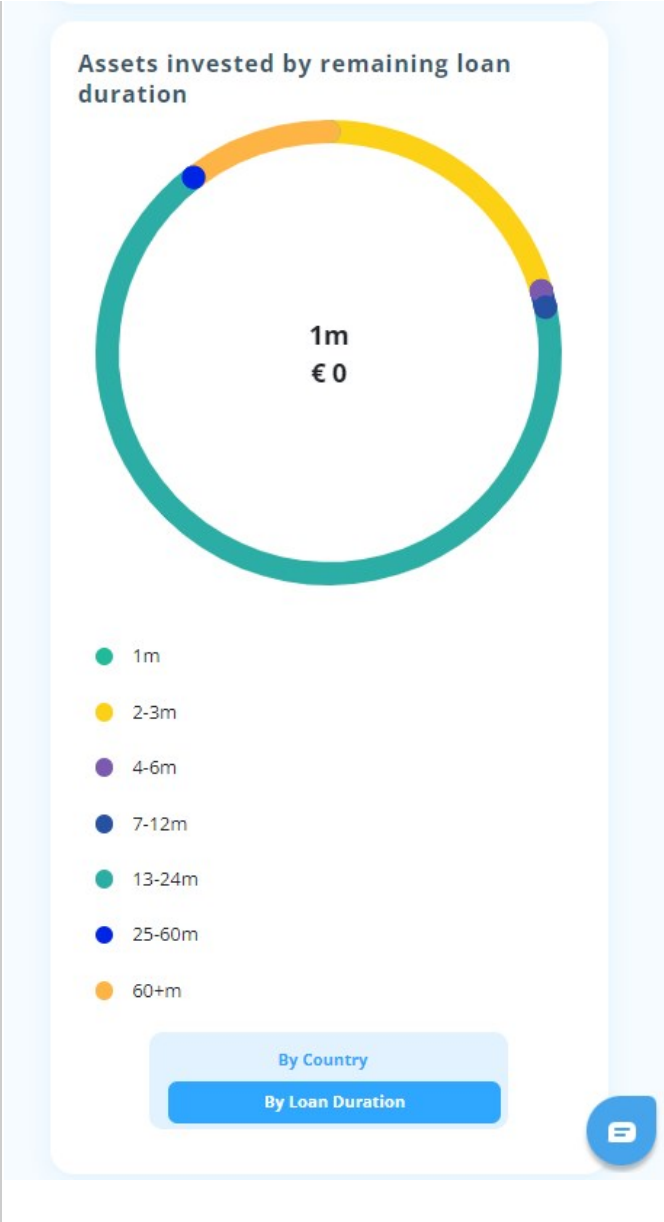

Expected result:

The user is presented with only the remaining loan duration timetable to select in a chart that has actual investments.

Actual result:

The user is presented with all available timetables in the chart to select even if there is 0 EUR value in them.

Good job with summary - you give more background info and potential harm for the business: 'would present illusion for users'.
